

## Sustainable worm control

- **Wormer resistance is the ability of worms to survive a dose that should kill them**
- **Stomach/gut worms resistant to wormers have now been found in dairy calves**

Drug	No. farms tested	Resistance
White (1-BZ)	15	60%
Yellow (2-LV)	11	18%
Clear (3-ML)	16	100%

## Take home messages

- **Ask your vet about testing - use a wormer that works on your farm**
- **Treating – treat only when needed**
- **Refugia – maintain susceptible worms on the farm, e.g. by not treating older/immune stock**
