

## Guidelines

- TAMS 3 solar capital investment scheme (SCIS):
  - 60% grant on solar panels and batteries
  - Standalone investment ceiling of €90,000
- TAMS aided systems can avail of the clean export guarantee (ESB grid connection necessary)
- Sizing guidelines cap the generation capacity:
  - Cap = total annual consumption
  - Max size (kWp) = Annual consumption ÷ 950 kWh
- Use water heater/batteries/ice for on-site storage
- **Paybacks approx. 3 to 4 years with grant**

## Take home messages

- Solar PV generates renewable electricity from daylight
- TAMS grants dramatically improve the time to payback
- Planning not required for most rooftop solar (unless in solar safeguarding zone)
- Qualifies for accelerated capital allowances (check with farm accountant)
