

Moorepark – RVL Cork Research Study (2013-19)

We compared farmer diagnosis with **postmortem** diagnosis in 120 dead calves from 35 dairy herds

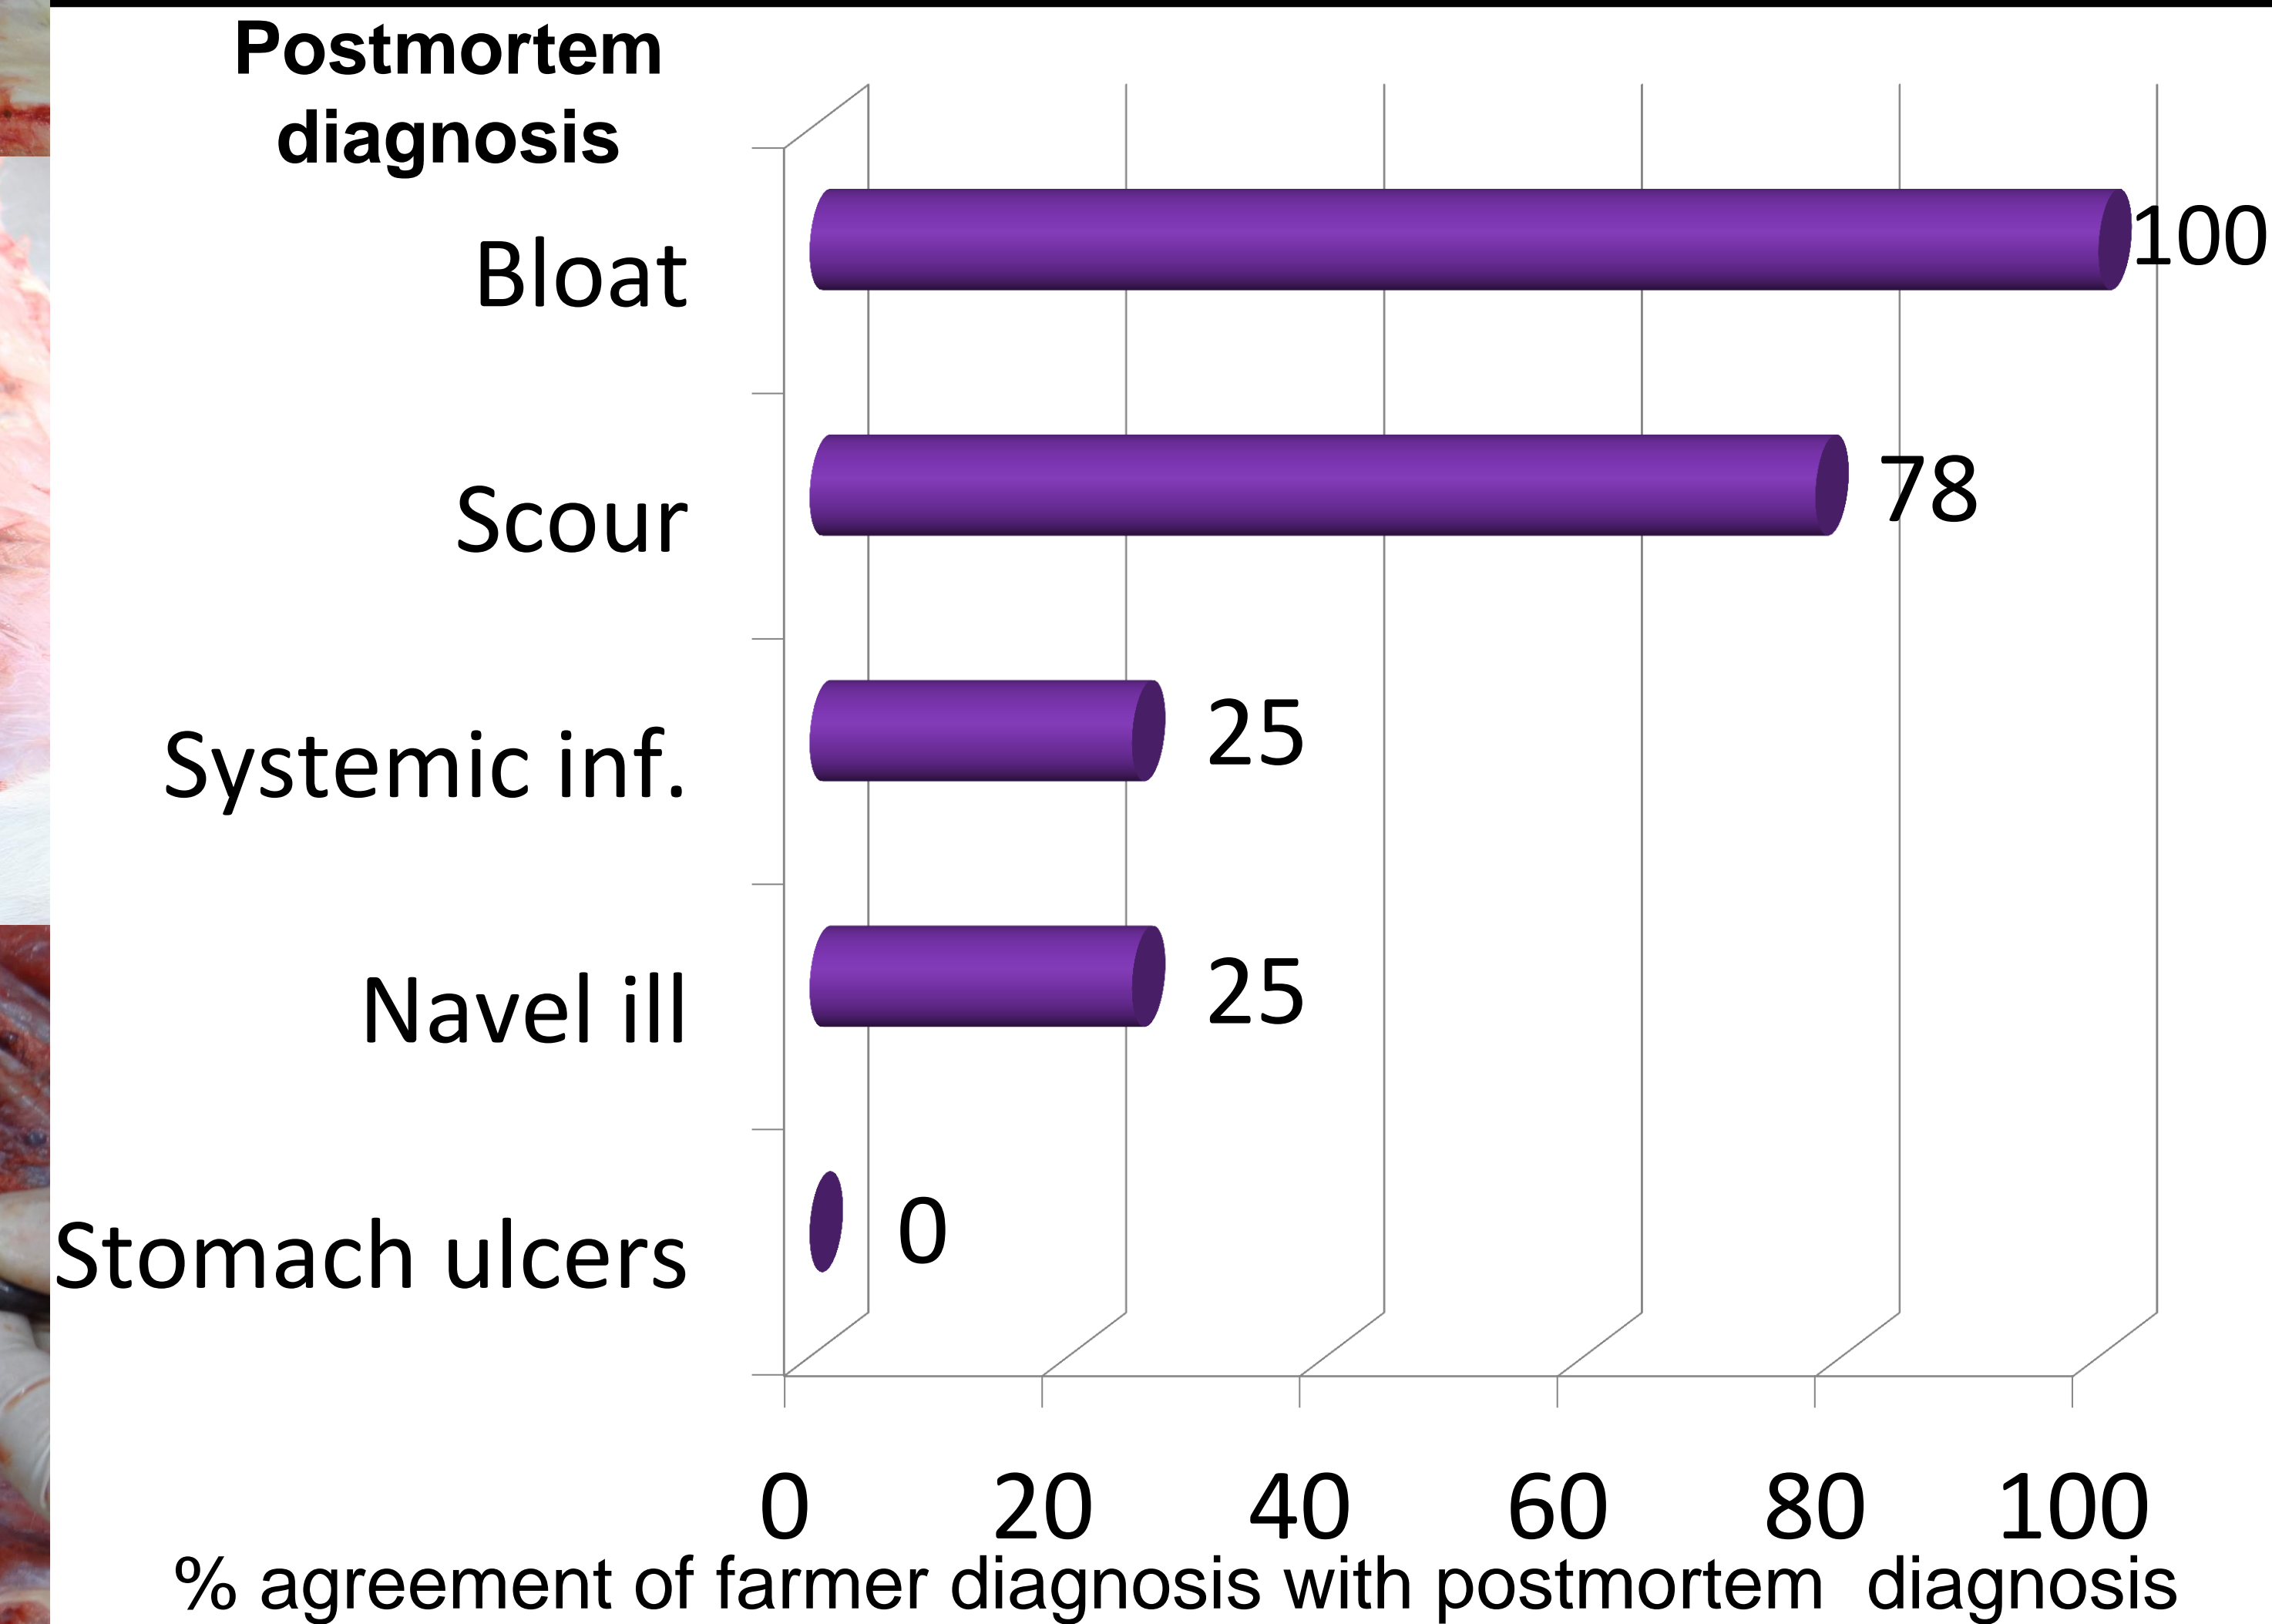

Calves ≤ 7 days old

69% agreement between farmer and postmortem diagnosis

Calves > 7 days old

38% agreement between farmer and postmortem diagnosis

Your take home message

Systemic infection should be suspected whenever a calf is diagnosed with a simple infection, e.g. scour or navel ill
