ASA Beef Event

Charleville

5th May 2016

Carcass grading

- In the EU, carcasses are classified according to the official carcass classification scheme
- Data recorded for beef carcasses include:
 - ✓ Carcass weight
 - ✓ Gender (Steer, heifer, young bull, bull and cow)
 - ✓ Carcass conformation score (S,E,U,R,O, P)
 - ✓ Carcass fat score (1 to 5 fattest)
- In Ireland mechanical carcass grading has replaced visual grading
 - ✓ Video imaging analysis (VIA) system

Good Conformation

Poor Conformation

Carcass conformation score

Carcass fat score

Percentage of beef carcasses in different conformation classes (2015)

	E	U	<u>R</u>	<u>O</u>	P
Steers	-	12	37	42	10
Heifers	-	17	52	28	4

Objective

Develop & test the accuracy of prediction equations for carcass traits derived from carcass grades.

Animals

Gender

- 115 bulls (13 to 17 mths old)
- 40 heifers (20 mths old)
- 507 steers (24 mths old)

662

Breed Type

- 4 genotype groups
 - Holstein-Friesian (HF)
 - Early-maturing x HF, Early-maturing x Early-maturing
 - Late-maturing x HF, Late-maturing x Early-maturing
 - Genotypes >0.75 Late-maturing

Carcass Measurements

- Carcass weight
- EU carcass conformation & fat scores (15-point scale)
- Right side of each carcass was quartered into
 - 8-rib Hind-quarter (Pistola)
 - Fore-quarter
- Dissected in Meat, Fat & Bone

Carcass Dissection

➤ Hind-quarter

➤ 13 meat cuts

- *leg, heel, silverside, topside, knuckle, rump, tail of rump, cap of rump, fillet, strip loin, cube roll, cap of rib, & eye of round*

➤ Fore-quarter

➤ 11 meat cuts

- *front shin, neck, brisket, chuck, flat ribs (1 to 5), plate, M. Triceps brachii, bladesteak, braising muscle, chuck tender, & clod*

Carcass Dissection

- **Bones** removed from cuts (where applicable) & scraped clean
- All visible **fat** removed from each cut
- Weight of each cut & total weight of fat trim, lean trim & bone recorded for hind-quarter & fore-quarter
- Lean trim added to meat cuts to give **meat yield**
- **Carcass value** = sum of wholesale values of individual meat cuts & lean trim with a small deduction for bone.

Statistical analysis

- Prediction equations developed using multiple regression:
 - Dependent variables: Meat, fat and bone proportion
 - Independent variables: Carcass grades, conformation & fat
- Prediction equations validated using a once-out cross validation.

Results: Linear prediction equations for meat, fat & bone proportion using carcass conformation & fat score (1-15)

	Intercept ¹	Conformation score	Fat score	R ²
Meat (g/kg)	698 ^a 704 ^b 713 ^c	+11.8 (0.40)***	-9.6 (0.47)***	0.73
Fat (g/kg)	113 96 100	-4.4 (0.36)***	+12.0 (0.56)***	0.67
Bone (g/kg)	190 200 187	-7.4 (0.20)***	-2.4 (0.24)***	0.71

¹ Intercept chosen = conformation & fat scores of 8 (Scale 1-15)

^a=Steer ^b=Bull ^c=Heifer

Source: Conroy et al. 2010a

Conclusion

Carcass classification scores (15-point scale) are relatively accurate predictors of carcass meat, fat and bone proportions.

Results: Regression of carcass value on carcass conformation & fat scores (1-15): steers

	Intercept	Conformation score	Fat score	R ²
Carcass value (c/kg)	296	+5.6 (0.30)***	-5.1(0.36)***	0.60
