

Smarter Milking Webinar Milking Routine

Pádraig O' Connor
8th July 2021

Outline

- Objectives
- Preparation for milking (parlour & milker)
- Efficient milking process (Herringbone)
- Efficient milking process (Rotary)
- Washing up

Objectives

- Production of Top Quality Milk.
- Safety for milker and cow.
- Efficient use of time spent milking

Preparation for milking

Row Filling

Preparing the cow

Preparation in Batches

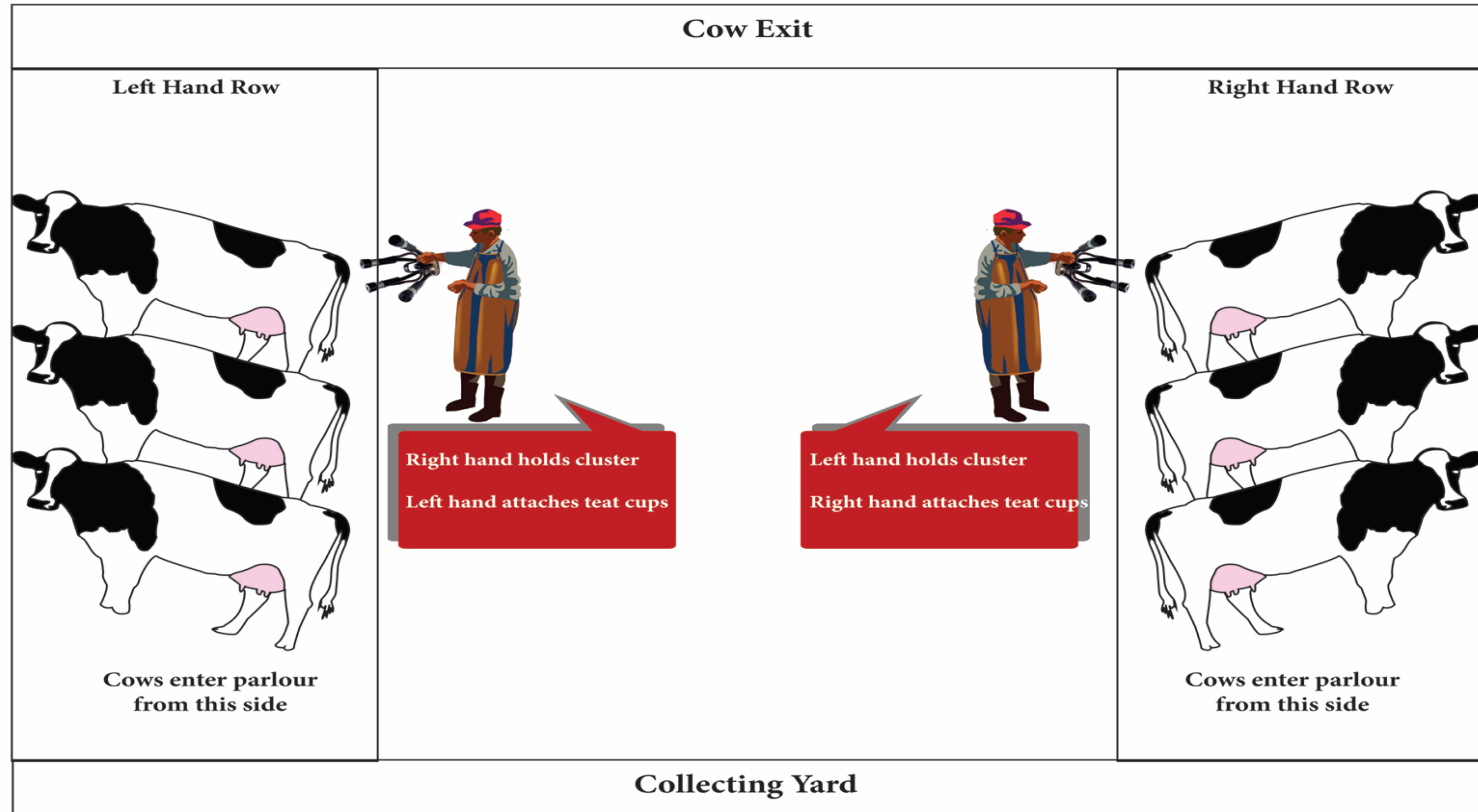

Bunny Hopping

Collecting Yard

Cluster Changing

[Play Video](#)

Teat Disinfection

Spray 15 mls/ cow/milking

Dip 10 mls /cow /milking

Drafting

Key drivers of efficiency (Herringbone)

- Start milking from the front of the parlour
- Start attaching clusters once the first couple of cows are in place
- Work in batches and teat spray as you go
- Practice bunny hopping with 2 milkers
- Efficient use of backing gate
- Open the exit gate early

Key drivers of efficiency (Rotary)

- Attach clusters in 4 seconds
- Operate the platform at an efficient speed
- Stand close to the bridge
- Keep the platform moving
- Efficient use of backing gate
- Swap between round the circle and applying 2 teat cups at a time when applying clusters to avoid RSI

Washing up after milking

- Wash down clusters using an exfoliation glove or a power hose without the lance
- Use a high volume low pressure to wash down the parlour
- The use of a slot drainage system on the cow stand area makes it easier to wash
- Periodic washing with a high pressure power hose will also keep the parlour clean

Benefits of Good Milking Routine

- Consistent Production of Top Quality Milk.
- Increased Parlour Efficiency.
- Consistent Milking.
- Reduced Repetitive Strain Injury.
- Less Mastitis and Lower SCC
- More Profitable

Milking Programme 2021

Best Practice in Milking
